OMAR NACEUR

AI Engineering Student – Agentic AI, LLM Systems, Computer Vision

Mahdia, Tunisia | +216 20 888 207 | omar.naceur01@gmail.com | linkedin.com/in/omar-naceur | github.com/OmarNaceur2001

Professional Summary

Data Science and AI engineering student focused on agentic Large Language Model (LLM) systems, scientific Natural Language Processing (NLP), information retrieval, and explainable computer vision. Builds Python and FastAPI applications and machine learning workflows. Seeking an AI/ML internship or entry-level position in Canada.

Technical Skills

AI and Machine Learning: Deep Learning, Computer Vision, LLMs, Agentic Systems, NLP, Information Retrieval, Prompt Engineering
Frameworks: PyTorch, TensorFlow, scikit-learn, FastAPI, OpenCV, MediaPipe
Programming and Data: Python, SQL, Pandas, NumPy, Power BI
Tools and APIs: Docker, Git, Playwright, Groq API, GitHub API, Jira Cloud API

Work Experience

Software Engineering Intern, Data Science and AI | Microedition, Monastir, Tunisia July 2026 – Present

- Integrate machine learning components and data pipelines into full-stack applications in an agile team; contribute to code reviews and technical discussions.

Projects

Agentic-SDLC – Autonomous Multi-Agent Software Delivery | Python, FastAPI, Llama 3.3, Playwright, GitHub API, Jira API

- Designed Planner, Code, and Testing agents that poll Jira tickets, generate web applications with Llama 3.3, commit code to GitHub, and validate DOM elements and JavaScript errors with Playwright.

SciLit – Evidence-Grounded Literature Review Pipeline | Python, FastAPI, BGE-M3, BM25, Cross-Encoder, NLI

- Built hybrid retrieval (BM25, BGE-M3, Reciprocal Rank Fusion, cross-encoder reranking) with claim-level Natural Language Inference (NLI) checks; tested on 1,109 papers and 68,510 passages with zero fabricated citations.

Medical AI Diagnostic Platform – Explainable Computer Vision | PyTorch, EfficientNet-B0, Grad-CAM, FastAPI, OpenCV

- Developed four-class brain MRI and benign/malignant breast histopathology classifiers, with Grad-CAM heatmaps showing the image regions behind each prediction.

RhythmAI – Multimodal Cardiac Decision Support Platform | Python, TensorFlow, PyTorch, FastAPI, React

- Trained models on PTB-XL (21,837 12-lead ECG recordings) for five diagnostic superclasses; built raw ECG signal and image ingestion and a role-based hospital administration portal.

Education

Engineering Degree in Data Science and Artificial Intelligence | ESPRIT, Monastir, Tunisia 2024 – Expected 2027

Coursework: Deep Learning, Machine Learning Systems, Statistical Modeling, Distributed Data Processing, Natural Language Understanding

Preparatory Classes for Engineering Schools | IPEI Gafsa, Tunisia 2022 – 2024

Certifications, Languages and Activities

Certifications: Fundamentals of Deep Learning (NVIDIA, February 2026); Introduction to Data Science (365 Data Science, 2025)
Languages: Arabic (Native), French (B2), English (B2)
Activities: AIESEC, Aerospace Club
